

METHOD FOR FORWARDING CALL FROM CELLULAR  
PHONE TO IP PHONE

ABSTRACT OF THE DISCLOSURE

To provide a method for forwarding a call which enables a connection between a called cellular phone and an IP phone, to which the incoming call is to be forwarded, by wireless communication, a method is provided for forwarding a call from the cellular phone to the IP phone in a communication system in which speech communication is carried out on an Internet Protocol network, comprising a first step in which during a call or a speech communication to the called cellular phone from a calling IP phone, a called person operates the called IP phone, to which the incoming call is to be forwarded, whereby a wireless communication is carried out between the called IP phone and the called cellular phone, and a second step in which after the first step, a function built in the called IP phone automatically performs communication with the calling IP phone, so that the incoming call to the called cellular phone is wirelessly forwarded to the called IP phone.
